

---

# Submission and Formatting Instructions for International Conference on Machine Learning (ICML 2026)

---

Anonymous Authors<sup>1</sup>

## Abstract

This document provides a basic paper template and submission guidelines. Abstracts must be a single paragraph, ideally between 4–6 sentences long. Gross violations will trigger corrections at the camera-ready phase.

## 1. Electronic Submission

Submission to ICML 2026 will be entirely electronic, via a web site (not email). Information about the submission process and `LATeX` templates are available on the conference web site at:

<http://icml.cc/>

The guidelines below will be enforced for initial submissions and camera-ready copies. Here is a brief summary:

- Submissions must be in PDF.
- If your paper has appendices, submit the appendix together with the main body and the references **as a single file**. Reviewers will not look for appendices as a separate PDF file. So if you submit such an extra file, reviewers will very likely miss it.
- Page limit: The main body of the paper has to be fitted to 8 pages, excluding references and appendices; the space for the latter two is not limited in pages, but the total file size may not exceed 10MB. For the final version of the paper, authors can add one extra page to the main body.
- **Do not include author information or acknowledgements** in your initial submission.
- Your paper should be in **10 point Times font**.

<sup>1</sup>Anonymous Institution, Anonymous City, Anonymous Region, Anonymous Country. Correspondence to: Anonymous Author <anon.email@domain.com>.

Preliminary work. Under review by the International Conference on Machine Learning (ICML). Do not distribute.

- Make sure your PDF file only uses Type-1 fonts.
- Place figure captions *under* the figure (and omit titles from inside the graphic file itself). Place table captions *over* the table.
- References must include page numbers whenever possible and be as complete as possible. Place multiple citations in chronological order.
- Do not alter the style template; in particular, do not compress the paper format by reducing the vertical spaces.
- Keep your abstract brief and self-contained, one paragraph and roughly 4–6 sentences. Gross violations will require correction at the camera-ready phase. The title should have content words capitalized.

### 1.1. Submitting Papers

**Anonymous Submission:** ICML uses double-blind review: no identifying author information may appear on the title page or in the paper itself. Section 2.3 gives further details.

Authors must provide their manuscripts in **PDF** format. Furthermore, please make sure that files contain only embedded Type-1 fonts (e.g., using the program `pdffonts` in linux or using File/DocumentProperties/FONTs in Acrobat). Other fonts (like Type-3) might come from graphics files imported into the document.

Authors using **Word** must convert their document to PDF. Most of the latest versions of Word have the facility to do this automatically. Submissions will not be accepted in Word format or any format other than PDF. Really. We're not joking. Don't send Word.

Those who use **LATeX** should avoid including Type-3 fonts. Those using `latex` and `dvi`s may need the following two commands:

```
dvips -Ppdf -tletter -G0 -o paper.ps paper.dvi  
ps2pdf paper.ps
```

It is a zero following the “-G”, which tells dvips to use the config.pdf file. Newer TeX distributions don't always need this option.

055 Using pdflatex rather than latex, often gives better  
 056 results. This program avoids the Type-3 font problem, and  
 057 supports more advanced features in the microtype pack-  
 058 age.

059 **Graphics files** should be a reasonable size, and included  
 060 from an appropriate format. Use vector formats (.eps/.pdf)  
 061 for plots, lossless bitmap formats (.png) for raster graphics  
 062 with sharp lines, and jpeg for photo-like images.  
 063

064 The style file uses the hyperref package to make click-  
 065 able links in documents. If this causes problems for you,  
 066 add nohyperref as one of the options to the icml2026  
 067 usepackage statement.  
 068

## 069 1.2. Submitting Final Camera-Ready Copy

070 The final versions of papers accepted for publication should  
 071 follow the same format and naming convention as initial  
 072 submissions, except that author information (names and af-  
 073 filiations) should be given. See Section 2.3.2 for formatting  
 074 instructions.  
 075

076 The footnote, “Preliminary work. Under review by the  
 077 International Conference on Machine Learning (ICML).  
 078 Do not distribute.” must be modified to “*Proceedings of*  
 079 *the 43<sup>rd</sup> International Conference on Machine Learning*,  
 080 Seoul, South Korea, PMLR 306, 2026. Copyright 2026 by  
 081 the author(s).”  
 082

083 For those using the LATEX style file, this change (and  
 084 others) is handled automatically by simply changing  
 085 \usepackage{icml2026} to

```
\usepackage[accepted]{icml2026}
```

086 Authors using Word must edit the footnote on the first page  
 087 of the document themselves.  
 088

089 Camera-ready copies should have the title of the paper as  
 090 running head on each page except the first one. The running  
 091 title consists of a single line centered above a horizontal rule  
 092 which is 1 point thick. The running head should be centered,  
 093 bold and in 9 point type. The rule should be 10 points  
 094 above the main text. For those using the LATEX style file, the  
 095 original title is automatically set as running head using the  
 096 fancyhdr package which is included in the ICML 2026  
 097 style file package. In case that the original title exceeds the  
 098 size restrictions, a shorter form can be supplied by using  
 099 \icmltitlerunning{...}  
 100

101 just before \begin{document}. Authors using Word must  
 102 edit the header of the document themselves.  
 103

## 104 2. Format of the Paper

105 All submissions must follow the specified format.  
 106

### 2.1. Dimensions

The text of the paper should be formatted in two columns, with an overall width of 6.75 inches, height of 9.0 inches, and 0.25 inches between the columns. The left margin should be 0.75 inches and the top margin 1.0 inch (2.54 cm). The right and bottom margins will depend on whether you print on US letter or A4 paper, but all final versions must be produced for US letter size. Do not write anything on the margins.

The paper body should be set in 10 point type with a vertical spacing of 11 points. Please use Times typeface throughout the text.

### 2.2. Title

The paper title should be set in 14 point bold type and centered between two horizontal rules that are 1 point thick, with 1.0 inch between the top rule and the top edge of the page. Capitalize the first letter of content words and put the rest of the title in lower case. You can use TeX math in the title (we suggest sparingly), but no custom macros, images, or other TeX commands. Please make sure that accents, special characters, etc., are entered using TeX commands and not using non-English characters.

### 2.3. Author Information for Submission

ICML uses double-blind review, so author information must not appear. If you are using LATEX and the icml2026.sty file, use \icmlauthor{...} to specify authors and \icmlaffiliation{...} to specify affiliations. (Read the TeX code used to produce this document for an example usage.) The author information will not be printed unless accepted is passed as an argument to the style file. Submissions that include the author information will not be reviewed.

#### 2.3.1. SELF-CITATIONS

If you are citing published papers for which you are an author, refer to yourself in the third person. In particular, do not use phrases that reveal your identity (e.g., “in previous work ([Langley, 2000](#)), we have shown ...”).

Do not anonymize citations in the reference section. The only exception are manuscripts that are not yet published (e.g., under submission). If you choose to refer to such unpublished manuscripts ([Author, 2021](#)), anonymized copies have to be submitted as Supplementary Material via Open-Review. However, keep in mind that an ICML paper should be self contained and should contain sufficient detail for the reviewers to evaluate the work. In particular, reviewers are not required to look at the Supplementary Material when writing their review (they are not required to look at more

110 than the first 8 pages of the submitted document).

### 112 2.3.2. CAMERA-READY AUTHOR INFORMATION

113 If a paper is accepted, a final camera-ready copy must be  
 114 prepared. For camera-ready papers, author information  
 115 should start 0.3 inches below the bottom rule surrounding  
 116 the title. The authors' names should appear in 10 point  
 117 bold type, in a row, separated by white space, and centered.  
 118 Author names should not be broken across lines. Unbolded  
 119 superscripted numbers, starting 1, should be used to refer to  
 120 affiliations.

121  
 122 Affiliations should be numbered in the order of appearance.  
 123 A single footnote block of text should be used to list all  
 124 the affiliations. (Academic affiliations should list Department,  
 125 University, City, State/Region, Country. Similarly for  
 126 industrial affiliations.)

127 Each distinct affiliations should be listed once. If an author  
 128 has multiple affiliations, multiple superscripts should be  
 129 placed after the name, separated by thin spaces. If the  
 130 authors would like to highlight equal contribution by multiple  
 131 first authors, those authors should have an asterisk placed  
 132 after their name in superscript, and the term “<sup>\*</sup>Equal contribu-  
 133 tion” should be placed in the footnote block ahead of the  
 134 list of affiliations. A list of corresponding authors and their  
 135 emails (in the format Full Name <email@domain.com>)  
 136 can follow the list of affiliations. Ideally only one or two  
 137 names should be listed.

138 A sample file with author names is included in the  
 139 ICML2026 style file package. Turn on the [accepted]  
 140 option to the stylefile to see the names rendered. All of the  
 141 guidelines above are implemented by the L<sup>A</sup>T<sub>E</sub>X style file.

## 142 2.4. Abstract

143 The paper abstract should begin in the left column,  
 144 0.4 inches below the final address. The heading ‘Abstract’  
 145 should be centered, bold, and in 11 point type. The abstract  
 146 body should use 10 point type, with a vertical spacing of  
 147 11 points, and should be indented 0.25 inches more than  
 148 normal on left-hand and right-hand margins. Insert 0.4 inches  
 149 of blank space after the body. Keep your abstract brief and  
 150 self-contained, limiting it to one paragraph and roughly 4–6  
 151 sentences. Gross violations will require correction at the  
 152 camera-ready phase.

## 153 2.5. Partitioning the Text

154 You should organize your paper into sections and paragraphs  
 155 to help readers place a structure on the material and under-  
 156 stand its contributions.

### 2.5.1. SECTIONS AND SUBSECTIONS

Section headings should be numbered, flush left, and set in 11 pt bold type with the content words capitalized. Leave 0.25 inches of space before the heading and 0.15 inches after the heading.

Similarly, subsection headings should be numbered, flush left, and set in 10 pt bold type with the content words capitalized. Leave 0.2 inches of space before the heading and 0.13 inches afterward.

Finally, subsubsection headings should be numbered, flush left, and set in 10 pt small caps with the content words capitalized. Leave 0.18 inches of space before the heading and 0.1 inches after the heading.

Please use no more than three levels of headings.

### 2.5.2. PARAGRAPHS AND FOOTNOTES

Within each section or subsection, you should further partition the paper into paragraphs. Do not indent the first line of a given paragraph, but insert a blank line between succeeding ones.

You can use footnotes<sup>1</sup> to provide readers with additional information about a topic without interrupting the flow of the paper. Indicate footnotes with a number in the text where the point is most relevant. Place the footnote in 9 point type at the bottom of the column in which it appears. Precede the first footnote in a column with a horizontal rule of 0.8 inches.<sup>2</sup>

## 2.6. Figures

You may want to include figures in the paper to illustrate your approach and results. Such artwork should be centered, legible, and separated from the text. Lines should be dark and at least 0.5 points thick for purposes of reproduction, and text should not appear on a gray background.

Label all distinct components of each figure. If the figure takes the form of a graph, then give a name for each axis and include a legend that briefly describes each curve. Do not include a title inside the figure; instead, the caption should serve this function.

Number figures sequentially, placing the figure number and caption *after* the graphics, with at least 0.1 inches of space before the caption and 0.1 inches after it, as in Figure 1. The figure caption should be set in 9 point type and centered unless it runs two or more lines, in which case it should be flush left. You may float figures to the top or bottom of a

<sup>1</sup>Footnotes should be complete sentences.

<sup>2</sup>Multiple footnotes can appear in each column, in the same order as they appear in the text, but spread them across columns and pages if possible.

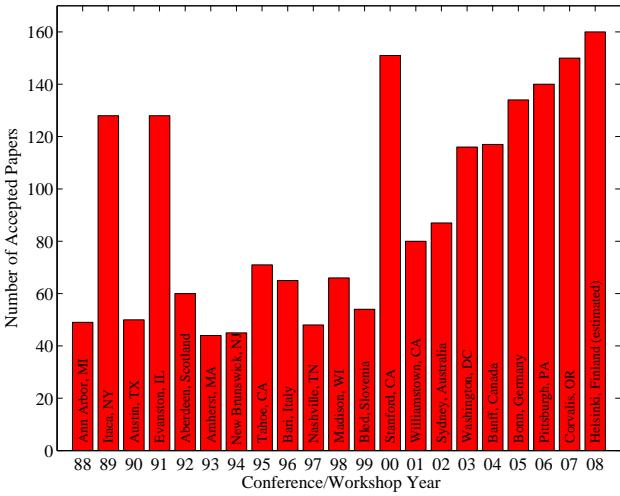

Figure 1. Historical locations and number of accepted papers for International Machine Learning Conferences (ICML 1993 – ICML 2008) and International Workshops on Machine Learning (ML 1988 – ML 1992). At the time this figure was produced, the number of accepted papers for ICML 2008 was unknown and instead estimated.

### Algorithm 1 Bubble Sort

```

Input: data  $x_i$ , size  $m$ 
repeat
    Initialize  $noChange = true$ .
    for  $i = 1$  to  $m - 1$  do
        if  $x_i > x_{i+1}$  then
            Swap  $x_i$  and  $x_{i+1}$ 
             $noChange = false$ 
        end if
    end for
until  $noChange$  is  $true$ 

```

column, and you may set wide figures across both columns (use the environment `figure*` in L<sup>A</sup>T<sub>E</sub>X). Always place two-column figures at the top or bottom of the page.

## 2.7. Algorithms

If you are using L<sup>A</sup>T<sub>E</sub>X, please use the “algorithm” and “algorithmic” environments to format pseudocode. These require the corresponding stylefiles, `algorithm.sty` and `algorithmic.sty`, which are supplied with this package. Algorithm 1 shows an example.

## 2.8. Tables

You may also want to include tables that summarize material. Like figures, these should be centered, legible, and numbered consecutively. However, place the title *above* the

Table 1. Classification accuracies for naive Bayes and flexible Bayes on various data sets.

DATA SET	NAIVE	FLEXIBLE	BETTER?
BREAST	$95.9 \pm 0.2$	$96.7 \pm 0.2$	✓
CLEVELAND	$83.3 \pm 0.6$	$80.0 \pm 0.6$	✗
GLASS2	$61.9 \pm 1.4$	$83.8 \pm 0.7$	✓
CREDIT	$74.8 \pm 0.5$	$78.3 \pm 0.6$	
HORSE	$73.3 \pm 0.9$	$69.7 \pm 1.0$	✗
META	$67.1 \pm 0.6$	$76.5 \pm 0.5$	✓
PIMA	$75.1 \pm 0.6$	$73.9 \pm 0.5$	
VEHICLE	$44.9 \pm 0.6$	$61.5 \pm 0.4$	✓

table with at least 0.1 inches of space before the title and the same after it, as in Table 1. The table title should be set in 9 point type and centered unless it runs two or more lines, in which case it should be flush left.

Tables contain textual material, whereas figures contain graphical material. Specify the contents of each row and column in the table’s topmost row. Again, you may float tables to a column’s top or bottom, and set wide tables across both columns. Place two-column tables at the top or bottom of the page.

## 2.9. Theorems and Such

The preferred way is to number definitions, propositions, lemmas, etc. consecutively, within sections, as shown below.

**Definition 2.1.** A function  $f : X \rightarrow Y$  is injective if for any  $x, y \in X$  different,  $f(x) \neq f(y)$ .

Using Theorem 2.1 we immediate get the following result:

**Proposition 2.2.** If  $f$  is injective mapping a set  $X$  to another set  $Y$ , the cardinality of  $Y$  is at least as large as that of  $X$

*Proof.* Left as an exercise to the reader.  $\square$

Theorem 2.3 stated next will prove to be useful.

**Lemma 2.3.** For any  $f : X \rightarrow Y$  and  $g : Y \rightarrow Z$  injective functions,  $f \circ g$  is injective.

**Theorem 2.4.** If  $f : X \rightarrow Y$  is bijective, the cardinality of  $X$  and  $Y$  are the same.

An easy corollary of Theorem 2.4 is the following:

**Corollary 2.5.** If  $f : X \rightarrow Y$  is bijective, the cardinality of  $X$  is at least as large as that of  $Y$ .

**Assumption 2.6.** The set  $X$  is finite.

*Remark 2.7.* According to some, it is only the finite case (cf. Theorem 2.6) that is interesting.

## 220 2.10. Citations and References

221 Please use APA reference format regardless of your format-  
 222 ter or word processor. If you rely on the L<sup>A</sup>T<sub>E</sub>X bibliographic  
 223 facility, use `natbib.sty` and `icml2026.bst` included  
 224 in the style-file package to obtain this format.

225 Citations within the text should include the authors' last  
 226 names and year. If the authors' names are included in the  
 227 sentence, place only the year in parentheses, for example  
 228 when referencing Arthur Samuel's pioneering work (1959).  
 229 Otherwise place the entire reference in parentheses with the  
 230 authors and year separated by a comma (Samuel, 1959). List  
 231 multiple references separated by semicolons (Kearns, 1989;  
 232 Samuel, 1959; Mitchell, 1980). Use the ‘et al.’ construct  
 233 only for citations with three or more authors or after listing  
 234 all authors to a publication in an earlier reference (Michalski  
 235 et al., 1983).

236 Authors should cite their own work in the third person in  
 237 the initial version of their paper submitted for blind review.  
 238 Please refer to Section 2.3 for detailed instructions on how  
 239 to cite your own papers.

240 Use an unnumbered first-level section heading for the refer-  
 241 ences, and use a hanging indent style, with the first line of  
 242 the reference flush against the left margin and subsequent  
 243 lines indented by 10 points. The references at the end of  
 244 this document give examples for journal articles (Samuel,  
 245 1959), conference publications (Langley, 2000), book chapters  
 246 (Newell & Rosenbloom, 1981), books (Duda et al.,  
 247 2000), edited volumes (Michalski et al., 1983), technical  
 248 reports (Mitchell, 1980), and dissertations (Kearns, 1989).

249 Alphabetize references by the surnames of the first authors,  
 250 with single author entries preceding multiple author entries.  
 251 Order references for the same authors by year of publication,  
 252 with the earliest first. Make sure that each reference includes  
 253 all relevant information (e.g., page numbers).

254 Please put some effort into making references complete,  
 255 presentable, and consistent, e.g. use the actual current  
 256 name of authors. If using bibtex, please protect capital  
 257 letters of names and abbreviations in titles, for example, use  
 258 `{B}ayesian` or `{L}ipschitz` in your .bib file.

## 259 263 Accessibility

264 Authors are kindly asked to make their submissions as ac-  
 265 cessible as possible for everyone including people with  
 266 disabilities and sensory or neurological differences. Tips  
 267 of how to achieve this and what to pay attention to will be  
 268 provided on the conference website <http://icml.cc/>.

## 269 Software and Data

270 If a paper is accepted, we strongly encourage the publication  
 271 of software and data with the camera-ready version of the  
 272 paper whenever appropriate. This can be done by including  
 273 a URL in the camera-ready copy. However, **do not** include  
 274 URLs that reveal your institution or identity in your sub-  
 275 mission for review. Instead, provide an anonymous URL or  
 276 upload the material as “Supplementary Material” into the  
 277 OpenReview reviewing system. Note that reviewers are not  
 278 required to look at this material when writing their review.

## 279 Acknowledgements

280 **Do not** include acknowledgements in the initial version of  
 281 the paper submitted for blind review.

282 If a paper is accepted, the final camera-ready version can  
 283 (and usually should) include acknowledgements. Such ac-  
 284 knowledgements should be placed at the end of the section,  
 285 in an unnumbered section that does not count towards the  
 286 paper page limit. Typically, this will include thanks to re-  
 287 viewers who gave useful comments, to colleagues who con-  
 288 tributed to the ideas, and to funding agencies and corporate  
 289 sponsors that provided financial support.

## 290 Impact Statement

291 Authors are **required** to include a statement of the potential  
 292 broader impact of their work, including its ethical aspects  
 293 and future societal consequences. This statement should be  
 294 in an unnumbered section at the end of the paper (co-located  
 295 with Acknowledgements – the two may appear in either  
 296 order, but both must be before References), and does not  
 297 count toward the paper page limit. In many cases, where  
 298 the ethical impacts and expected societal implications are  
 299 those that are well established when advancing the field of  
 300 Machine Learning, substantial discussion is not required,  
 301 and a simple statement such as the following will suffice:

302 “This paper presents work whose goal is to advance the field  
 303 of Machine Learning. There are many potential societal  
 304 consequences of our work, none which we feel must be  
 305 specifically highlighted here.”

306 The above statement can be used verbatim in such cases, but  
 307 we encourage authors to think about whether there is content  
 308 which does warrant further discussion, as this statement will  
 309 be apparent if the paper is later flagged for ethics review.
